SUMMARY

Full-stack Software Engineer with 3+ years of experience designing, building, and deploying scalable, cloud-hosted web applications across back-end (Java, Node.js, Spring Boot, RESTful APIs) and front-end (JavaScript, TypeScript, React.js) technologies, backed by hands-on work with SQL and NoSQL (MongoDB) databases. Experience building AI-enabled application features — including a conversational assistant using the OpenAI API and prompt engineering for real-time, context-aware responses. Comfortable translating business requirements into technical designs, integrating backend services, and delivering through CI/CD pipelines (GitHub Actions) within Agile/Scrum sprints. Strong software engineering fundamentals (clean code, debugging, testing, code review) and experience applying secure development practices and stakeholder communication in fast-moving, cross-functional teams.

TECHNICAL SKILLS

- Languages: Java, JavaScript, TypeScript
- Full-Stack Application Development: REST API / Web API design & development, Node.js, NestJS, Spring Boot, React.js, Next.js, HTML5, CSS3, Tailwind CSS, Material UI, third-party service integration
- Databases: MongoDB (schema design, indexing), SQL, relational data modeling, application performance tuning
- AI-Enabled Application Development: OpenAI API integration, prompt engineering & optimization, conversational/chat assistant design, AI-assisted engineering workflows (Cursor AI, Claude), Responsible AI awareness
- Cloud & DevOps: CI/CD pipelines (GitHub Actions), Git/GitHub source control, automated build & release processes, application monitoring & troubleshooting, secure application development (authentication/authorization)
- Engineering Practices: Agile/Scrum, design reviews, peer code review, requirement analysis, bug & change tracking, cross-functional stakeholder collaboration
- Data Structures & Algorithms: 150+ problems solved in Java (LeetCode); strong grounding in OOP design

WORK EXPERIENCE

Software Engineer — Impactility, Pune

Feb 2024 – Present

- Design, build, deploy, and improve full-stack features for ServCare, a citizen-facing sustainability platform — owning delivery end-to-end across a Java/Node.js back-end, MongoDB and SQL data layer, and React.js front-end.
- Translate business requirements into technical designs and implementation plans, building RESTful API endpoints and integrating backend services while partnering directly with product stakeholders to identify pain points and define solutions.
- Improved application performance and reliability by redesigning MongoDB schema and indexing strategy, reducing average query response time by ~40% on high-traffic endpoints.
- Perform peer code reviews each sprint and track bugs/changes through the team's issue-management workflow, giving feedback on style, correctness, testability, and efficiency to uphold engineering standards.
- Led design and rollout of a reusable UI component library, reducing new-feature development time by ~25% and improving consistency across the platform.
- Adapt priorities and collaborate cross-functionally within 2-week Agile sprints, delivering 3–5 features per quarter and supporting release readiness through CI/CD (GitHub Actions).

Software Engineer — Tech Alchemy, Pune

Sep 2023 – Jan 2024

- Built full-stack React.js modules integrating blockchain APIs, partnering with back-end engineers to define and validate API contracts for seamless integration.
- Refactored legacy components into a shared, reusable library, reducing duplicate code and easing long-term maintenance.
- Participated in peer code reviews and Agile sprint ceremonies, contributing to team-wide adoption of front-end best practices.

Software Engineer Intern — Tech Alchemy, Pune

Jun 2023 – Aug 2023

- Built responsive front-end applications (React.js, TypeScript) and integrated REST APIs under senior engineer guidance within an Agile sprint cycle.

Java Full Stack Developer Intern — Codekul Pvt Ltd, Pune

Jun 2021 – Aug 2021

- Developed a full-stack service-marketplace platform, building front-end components (React.js, HTML5, CSS) and back-end REST APIs (Java, Spring Boot).
- Collaborated with the development team to implement and test application features.

PROJECTS

ServCare AI Assistant — React.js, Node.js, OpenAI API

- Designed and built an AI-powered conversational assistant using prompt engineering for real-time, context-aware customer queries and service discovery, with a responsive React.js front-end — an early hands-on application of AI-enabled application development patterns (chat, content generation).

EDUCATION

MIT Academy of Engineering

Bachelor of Technology, Electronics & Telecommunication Engineering | 2019 – 2023 | CGPA: 8.62

ACHIEVEMENTS

- Solved 150+ Data Structures & Algorithms problems in Java on LeetCode.
- Completed Zensar Technologies Skill Development Training (Java, OOP, DBMS, SQL).
